

Osteoporosis Management in Women Who Had a Fracture (OMW)

For the Medicare line of business

Osteoporosis management in women who had a fracture (OMW) measures the percentage of women 67 years of age and older who suffered a fracture and who had either a bone mineral density (BMD) test or a prescription for a drug to treat or prevent osteoporosis in the six months after the fracture. Fractures of fingers, toes, face and skull are not included in this measure. Below are the Current Procedural Terminology (CPT®), Healthcare Common Procedure Coding System (HCPCS), ICD-9-CM and ICD-10-CM procedure codes that indicate either a BMD test has been performed or a prescription has been given.
